

Cisco Unified Edge

Future proof and simplify enterprise edge infrastructure and operations with a unified platform

Market trends

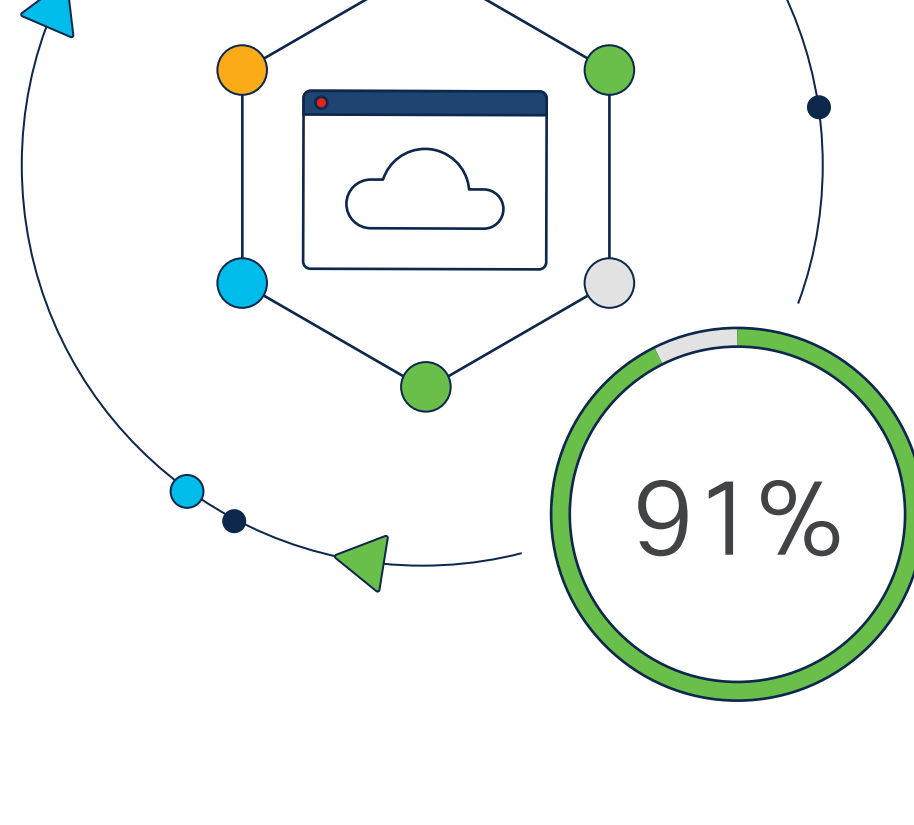

83% of C-level execs believe edge computing will be essential to remaining competitive¹

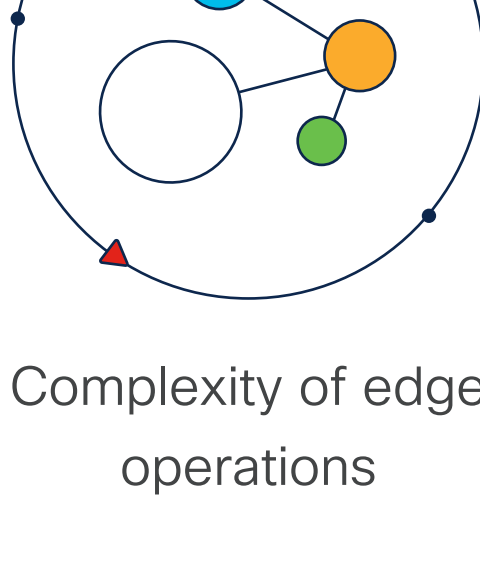

Greater than 55% of data analysis by deep neural networks will occur at the point of capture in an edge system²

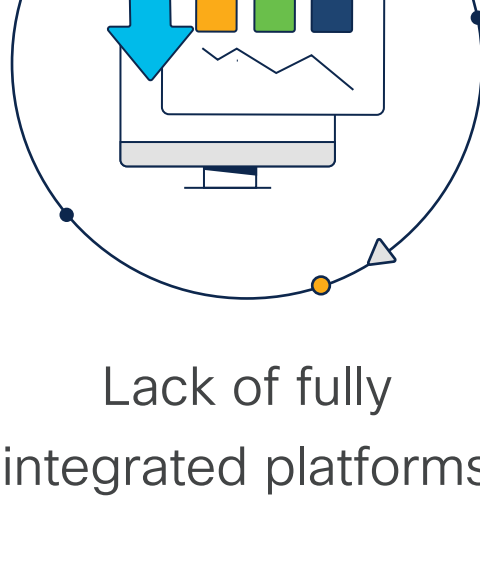

91% of organizations believe they would benefit from more consistency in edge infrastructure management³

Industry challenges

Complexity of edge operations

Lack of fully integrated platforms

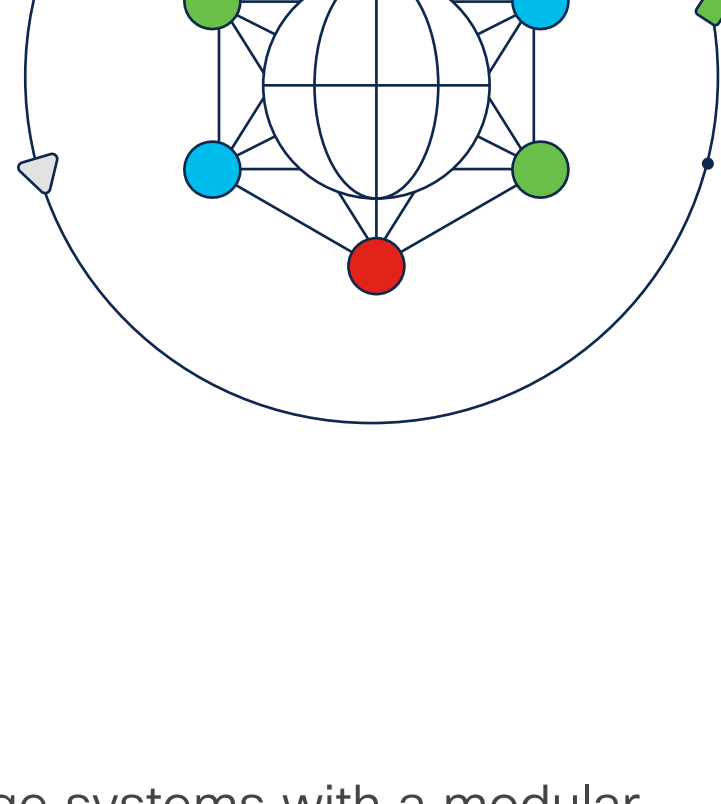

Increasing demand for AI at the edge

Transforming the enterprise edge: The critical role of unified edge infrastructure for the AI era

Cisco Unified Edge: Simplify, unify, and redefine edge infrastructure and operations

Simplify edge IT operations with global server fleet visualization, configuration consistency and zero-touch provisioning

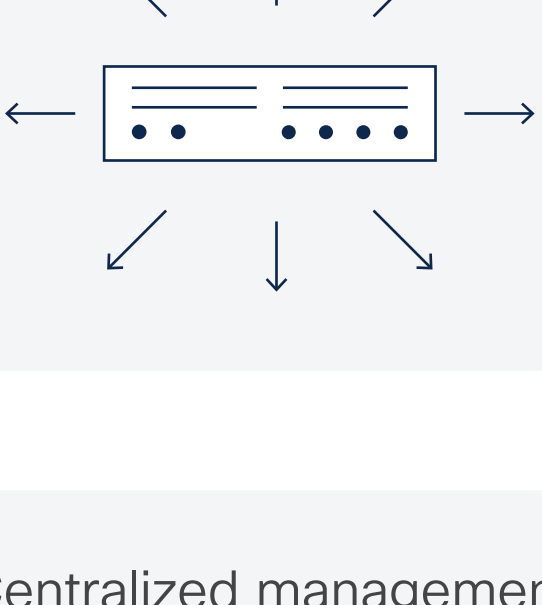

Unify edge systems with a modular, edge-optimized, and SaaS managed platform to minimize security risks and streamline lifecycle management

Redefine edge solutions for AI era without compromising on performance or efficiency

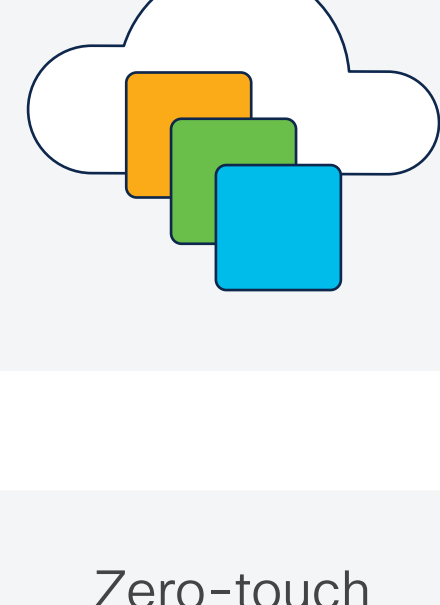

Simplify the operational experience

Global server fleet visualization

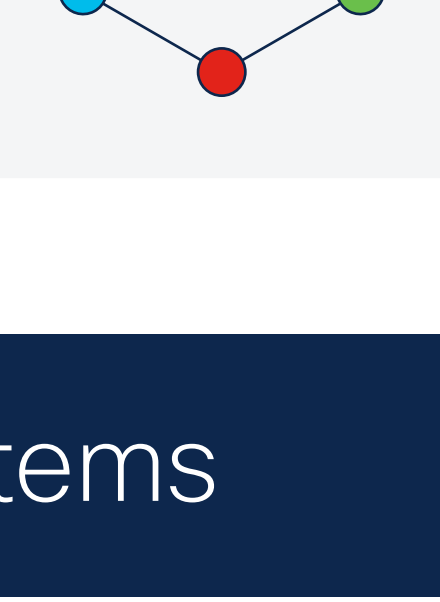

Full-stack plug and play policies

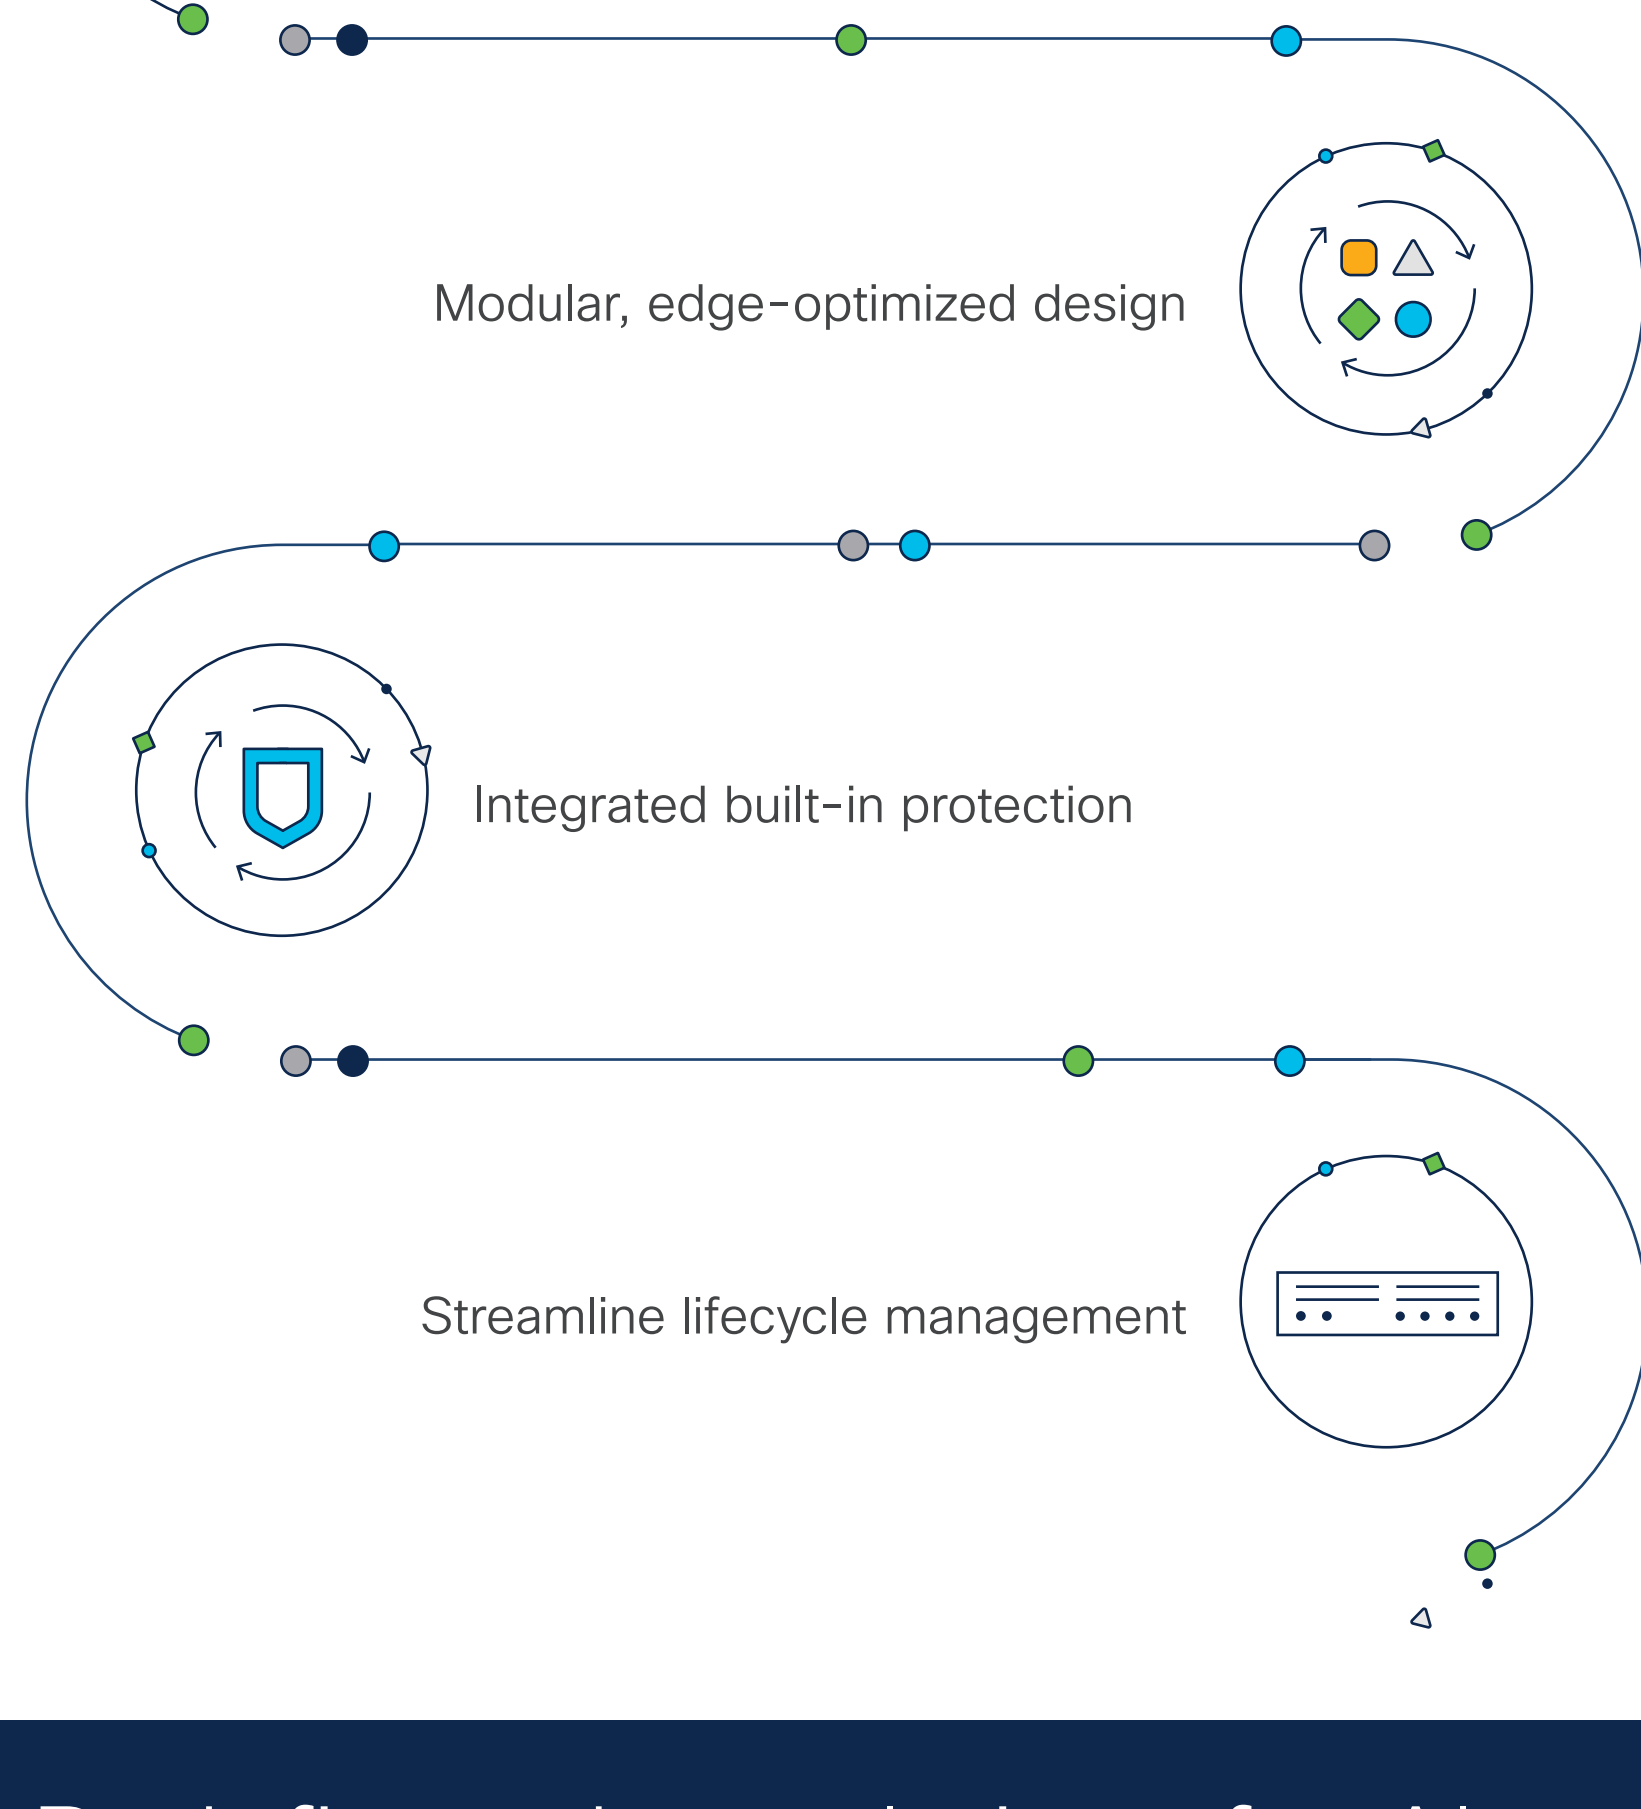

Centralized management at edge scale

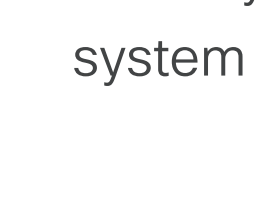

Zero-touch deployment

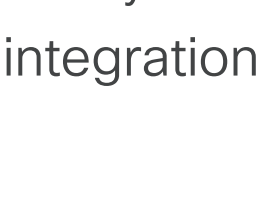

Unify edge systems

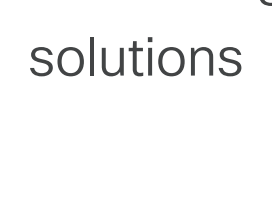

Redefine edge solutions for AI era

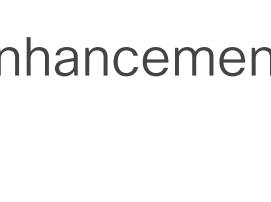

AI-ready system

Ecosystem integration

Validated edge solutions

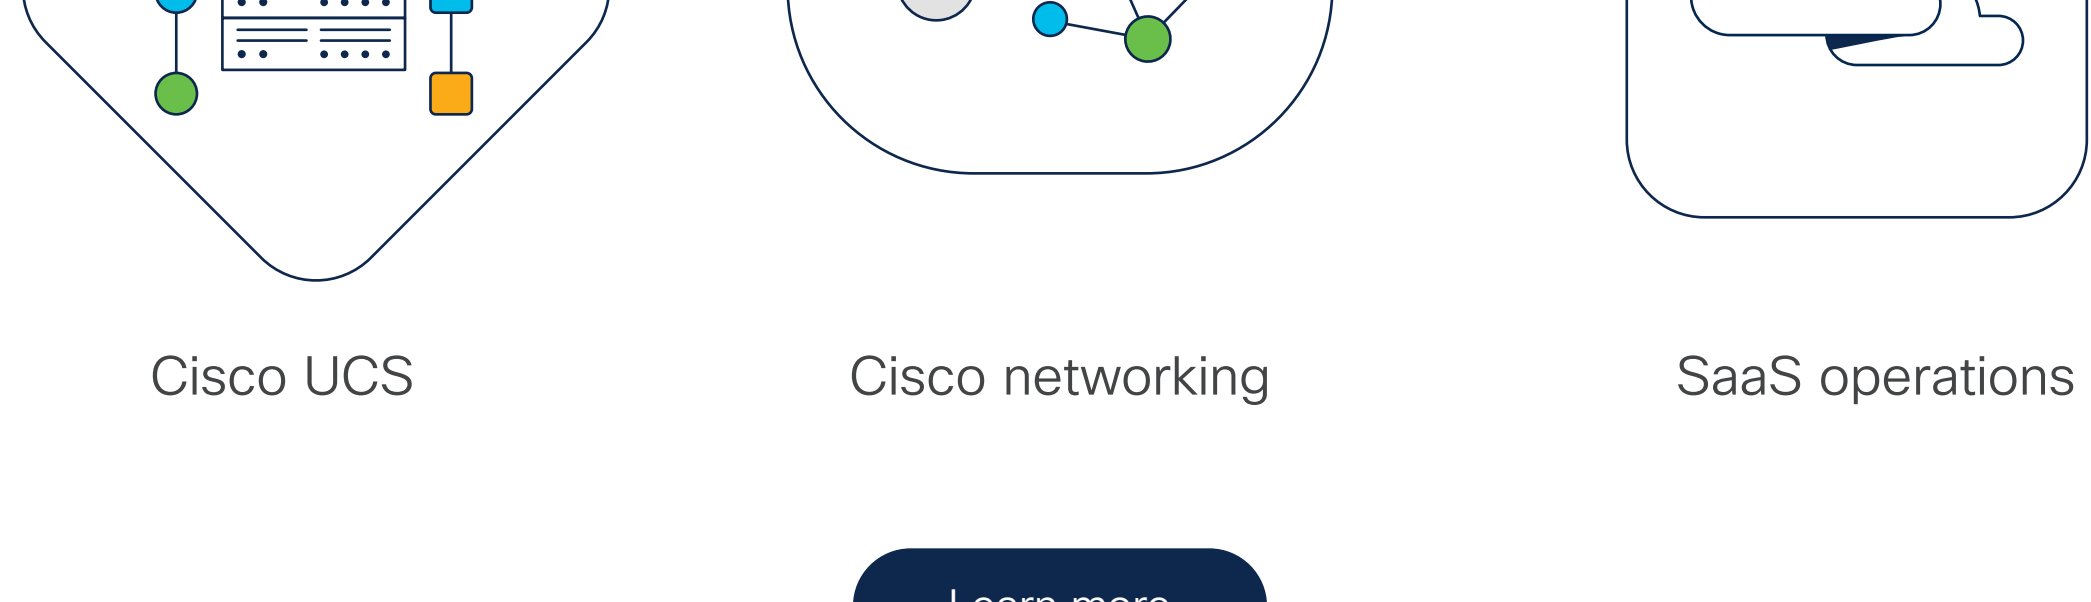

Continuous SaaS enhancements
